Skills

AI/ML: LangChain, LangGraph, RAG, Context/Prompt Engineering

LLMOps: Traces, Monitoring, Evals

Cloud & Infrastructure: Azure: OpenAI, Blob Storage, AI Search/Services, AWS: SageMaker, S3, Lambda, ECS, RDS.

DevOps: Terraform, Container orchestration/Docker, CI/CD, GitHub Actions, Git.

Python, TypeScript, SQL, C#, C++, FastAPI, .NET, React, PostgreSQL.

Languages

Portuguese: Native
English: Fluent

Certifications

IBM Applied DevOps Engineering

Vítor Babo

AI Engineer

AI Engineer with a robust background in full-stack development and MLOps, combining technical expertise in LLM deployment, RAG architectures, and cloud infrastructure (AWS/Azure). Track record of building scalable AI solutions from prototype to production, with focus on operational excellence through IaC and CI/CD automation. Experienced in cross-functional collaboration, technical leadership, and establishing software best practices.

Work experience

AI Instructor

November 2025
Current

Code for All

- Delivered a hands-on course for software developers focused on practical AI integration, RAG architectures, and LLM application logic.
- Upskilled professionals in bridging traditional coding with AI workflows, guiding the development of functional prototypes using Python, OpenAI API, and LangChain.

MLOps Engineer

October 2024
Current

Continental

- Led full-stack development of an internal AI platform for chat assistants used by 300+ users, improving organizational knowledge access by 30%.
- Engineered agentic retrieval patterns using Azure OpenAI, LangChain, and LangGraph, significantly improving query accuracy for critical internal data.
- Architected an LLMOps framework to monitor model latency and cost; implemented automated RAG evaluation pipelines using DeepEval to quantify retrieval faithfulness and answer relevance.
- Provisioned resources across AWS and Azure using Terraform; implemented automated CI/CD pipelines via GitHub Actions.
- Established standards and best practices for AI/LLM applications, reducing tech stack variability.

Software Engineer

September 2022
October 2024

Continental Engineering Services

- Developed an IoT application integrating MQTT/REST protocols and Azure IoT, ensuring reliable OT-to-IT data bridging.
- Built sensor data collection pipeline using .NET and SQL Server optimized for high-throughput ingestion to support predictive maintenance ML models.
- Refactored legacy PLC software into containerized C#/.NET microservices for edge deployment, improving system maintainability.
- Developed control software (C++) for a reforestation robot, achieving 80% process automation.

Education

M.Sc. Electrical and Computer Engineering

2020
2022

University of Porto

Specialization: Industrial Automation & Robotics

Master's Thesis: Developed a real-time production line simulator in Unity3D with integration to an IIoT solution for Digital Twins.

B.Sc. Electrical and Computer Engineering

2017
2020

University of Porto

● Side Projects

LLM Cost Calculator

Tool for real-time cost estimation across major LLM providers (OpenAI, Anthropic), enabling developers to optimize API spend. ([OSS](#))

IoT Hub Water Treatment Plants

Water treatment plant simulation and edge gateway. Supports multiple plants with centralized templates and protocol clients. Perfect for both simulation and production data collection from real PLCs. ([OSS](#))

Data Science Competition Winner

Won the "[Habitação Transparente](#)" challenge from DSPT by developing and deploying a dynamic dashboard for the Portuguese housing market; prize money donated to social housing.

Digital Twin for Industry 4.0

[Digital twin simulator](#) developed in Unity3D and integrated with IIoT solution for simulation/testing production line scenarios in manufacturing systems.
